## The Tri-County Recycling Facility

# Growing Strong!

Most recyclables are collected curbside, but a few communities still provide drop-off centers. In Brown and Winnebago Counties some communities hire a private hauler to collect curbside recycling. Communities, such as Green Bay and Oshkosh, have city owned trucks that collect while other communities allow their residents to hire their own hauler. In Outagamie County the Department of Solid Waste contracts with one hauler to collect curbside recycling.

No matter who picks up your recycling, it is eventually brought to the publically-owned and operated Tri-County Recycling Facility located in Appleton, WI.

The Tri-County Recycling Facility is where the recyclables are:

- separated from one another by hand and by high tech sorting equipment
- compressed into storage bales for easy shipping
- marketed and sold to companies to be re-manufactured into a wide array of new products

When the Tri-County Recycling Facility opened in July 2009, the service area was limited to the three BOW counties, Brown, Outagamie and Winnebago, which served 65 communities and more than 200,000 households.

Through the years we have steadily increased our service area and tonnages. During 2010, our first full year of operation, we processed 46,000 tons of recyclables. In 2013 we processed more than 80,000 tons, which was a 74 percent increase in just three years.

Increasing our business service area has allowed us to fully utilize our capital investment in the recycling facility by implementing a full-time second shift. The two shifts of operation employ nearly 60 people in the mission of recycling.

The Tri-County Recycling Facility continues to be a centerpiece of Wisconsin's recycling industry, creating jobs, protecting the environment, conserving resources and encouraging all to **Recycle More...Landfill Less.**

### 2013 Recycling Success!!!

Last year **82,128 tons** of material was diverted from the landfill and recycled. This is equal to 5,475 semi truck loads.

*Recycling More...  
Landfilling Less*

**Group tours are available by calling 920-832-5277.  
Tours are normally offered Monday - Friday 8:00 a.m. to 3:00 p.m.**

# Recycling DOs & DON'Ts

## Plastic

**ACCEPT:**

- #1 Plastic bottles such as water and soda bottles
- #2 Plastic bottles and jugs such as milk jugs and laundry detergent bottles

**DO NOT ACCEPT:**

- No Plastic Bags, Wrap or Film
- No Motor Oil Bottles
- No Styrofoam

**GUIDELINES:**

- *Remove all caps and lids and discard*
- *Rinse bottles and jugs*

## Aluminum & Steel

**ACCEPT:**

- Aluminum Cans and Bottles
- Steel, Tin and Bi-Metal Cans
- Empty Aerosol Cans

**DO NOT ACCEPT:**

- No Aluminum Pans or Foil
- No Empty Paint Cans

**GUIDELINES:**

- *Rinse cans and bottles*
- *No need to remove labels*

## Paper

**ACCEPT:**

- Cardboard and Paperboard (cereal box)
- Newspaper and Inserts
- Junk Mail and Office Paper
- Phone Books, Books, Magazines & Catalogs
- Shredded Paper (put in brown paper bag & staple shut)

**DO NOT ACCEPT:**

- No Tissue
- No Paper Contaminated by Food or Grease

**GUIDELINES:**

- *Flatten and cut cardboard to no larger than 3' X 3'*

## Glass

**ACCEPT:**

- Food and Beverage Bottles and Jars

**DO NOT ACCEPT:**

- No Windows, Ceramics or China

**GUIDELINES:**

- *Rinse bottles and jars*
- *Metal caps and lids should be recycled, discard plastic caps and lids*

# Recycling Questions

# TOP 5

# 1

## Why can I recycle ONLY #1 and #2 plastics?

### Great News!!!

Currently we are able to collect **ONLY** #1 and #2 plastic bottles and jugs. Recently, the markets for #4 and #5 dairy tubs and lids have become stable and reliable. We are in the process of adding sorting stations, conveyor belts, storage silos and a second baler. Once the facility is ready, we will be able to accept more plastics. We are planning on midsummer 2014. See the article on page 14.

# 3

## What do I do with plastic bags?

Plastic bags are highly recyclable, but **NOT** through your curbside program. The Tri-County Recycling Facility is not designed to remove plastic bags, and the bags wrap around the equipment causing maintenance issues.

Please take your plastic bags and other film plastics to a local retail or grocery store to be recycled.

# 2

## Should I remove my bottle caps and rinse my containers?

Removing your bottle caps is a good recycling habit. When caps are left on, the liquids stay in the bottle which makes it difficult for the specialized machinery to properly sort the plastic. The bottle could end up in the trash rather than being recycled.

As a courtesy to the people who sort the recycling, we ask that you rinse your containers before tossing them into your bin or cart. Also, there is no need to remove the labels because they are burned off during the recycling process.

# 4

## Can I recycle aluminum foil and pie pans?

The Tri-County Recycling Program does **NOT** accept aluminum foil and pans because they are made from lower grade aluminum than the aluminum used to make beverage cans.

You may recycle aluminum pans and foil through a local scrap metal dealer.

# 5

## What should I do with shredded paper?

To recycle shredded paper we ask that you put it in a paper bag; staple it closed, label the bag and put it in your curbside container.

This method keeps the pieces of paper from blowing around the neighborhood while sitting at the curb, during transportation and at the recycling facility.

**DO NOT** use PLASTIC bags!  
See #3...

### EXCEPTIONAL PERSONAL SERVICE & UNBEATABLE PRICES

Whatever you need, Van's Waste has containers, hauling and recycling services to meet those needs.

### WE SPECIALIZE IN OFFERING SERVICES FOR:

Commercial & Industrial • Construction & Demolition (C&D)  
Residential/Homeowner Projects • Recycling • Roofing

### OUR PRODUCTS CONSIST OF:

Roll-Off Containers • Front Loader Containers • Clean-Up/Construction Containers  
Demolition Containers • Roofing Containers • Recycling Containers and Service  
Trash Compactor Sales and Service

### Van's Waste locally owned & operated

Call us at (920) 687-2631 to order a waste container today or visit [www.vanswasteinc.com](http://www.vanswasteinc.com) for additional information.

# Electronics Recycling

Computers, computer accessories, TVs, cell phones and other electronics contain harmful materials including lead, mercury, cadmium, chromium, other heavy metals and chemical flame retardants. When thrown in the landfill, incinerated or illegally dumped, these chemicals can leach into the environment, where they may affect human and environmental health.

It is also important to recycle electronics because of the valuable reusable materials they contain, including plastics, metals, circuit boards and others. Recycling or reusing these materials reduces environmental impacts and economic costs by reducing the need for virgin materials in producing new electronics.

According to the DNR, electronics are one of the fastest growing parts of the waste stream in the United States. Each year there are millions of pounds of electronic waste in Wisconsin alone.

Many electronic devices have been banned from landfill disposal in Wisconsin. Although collection fees may still be imposed by local collectors for the recycling of the electronic device, this law was designed to make recycling more convenient, especially in rural areas.

## State Law requires the following items to be recycled:

- Televisions
- Computers (desktop, laptop, notebook and tablet computers)
- Printers/scanners/copiers
- Computer monitors
- Computer accessories (keyboards, mice, speakers, hard drives and flash drives)
- E-readers
- DVD, VCR and DVR players
- Fax machines
- Cell phones

# Recycling Christmas Lights

Do you remember when one burned-out light bulb rendered an entire string of Christmas lights virtually useless? Thankfully, that frustration has been remedied by light manufacturers, and burned-out bulbs are now easily identified and replaced. Yet Americans still waste several million pounds of Christmas and other holiday lights each year.

Fortunately, the value of worn-out strings of lights and extension cords is gaining recognition. There is growing interest in the possibility of recycling them, rather than throwing them in the landfill. As awareness of this possibility increases, more and more people want to know where they can recycle their lights and cords.

Many local scrap metal businesses collect strings of lights and cords year-round, and usually pay a small price per pound for them. Some hardware stores, such as Lowe's and The Home Depot, offer recycling drop-off programs during the holidays. Lowe's accepts old lights from early November through the end of December, while The Home Depot collects for two weeks in the early part of November. If you're looking to donate to a nonprofit, some Habitat for Humanity ReStore locations also collect old lights. A final option is to drop off your worn-out holiday lights to one of several local collection drives that take place during the holiday season. The lights collected at these drives are sold to scrap metal dealers and the proceeds are donated to local school groups.

# Composting

Composting is Mother Nature's recycling method. By composting our food wastes and yard materials we can reduce the amount of trash put into landfills. In return, we create an all natural soil amendment which eliminates the need to use harsh fertilizers on our lawns and gardens.

What You'll Need:

- Compost bin**, either manufactured or homemade (you can also leave the compost in a "heap," but this may be unsightly in urban areas)
- Lawn and garden clippings, dry leaves**
- Food scraps**, such as fruit rinds, coffee grounds, vegetable scraps, egg shells, etc. (No meat or oily foods)
- Water source**
- Pitch fork for turning**

## Getting Started

Compost "recipes" vary among gardeners, but a good rule of thumb is 50 percent "green" material like grass clippings and food scraps, to 50 percent "brown" material such as dry leaves and wood shavings. The "green" is rich in nitrogen and will keep the pile hot. The "brown" material adds carbon to the mix and will keep the pile cool. Both work in concert to create the right blend for maximum compost creation.

Place your compost near a water source for easy watering in case your pile needs moisture. Your compost pile should feel like a rung-out sponge and smell earthy. If odor issues exist, you should turn the pile with a pitchfork to add oxygen and consider adding some "brown" material as well.

Depending on how carefully you manage your pile, composting can take from 1 month to 2 years. Most piles that are turned weekly and kept at the right moisture level can produce completed compost in about six to eight weeks. Once your pile is a rich, dark color and you can hardly identify the materials you added, you have a finished product.

## Problem Solving for Odor or Pests:

- Odors:** These are usually caused by too many "greens" or the "greens" were not adequately stirred into the mixture. Try mixing in more "browns."
- Rodents or animals:** Rodents are usually attracted to fatty foods or meats, which should not be added to the compost.
- Moisture:** Too much or too little can cause problems. Cover your compost during rainy weather to avoid over-wetting and rotting. Sprinkle a little water on the pile only in periods of drought. The moisture consistency should remain similar to a wrung-out sponge.

# Proper Sharps Disposal

## For Local Drop-Off Locations

- Brown County**  
Page 21
- Outagamie County**  
Page 24
- Winnebago County**  
Page 29

More than 8 million people in the U.S. use sharps to treat all sorts of medical conditions in the home, and the number of conditions treated at home with injectable medicines continues to rise.

Wisconsin law prohibits all sharps including needles, syringes and lancets, from being disposed of in household trash or with curbside recyclables.

The Tri-County Recycling Facility is finding an increasing number of used needles being improperly disposed of in the household recyclables. Improper

sharps disposal is a serious public health risk due to the potential for accidental needle sticks during the hand sorting of recyclables. Accidental needle sticks may cause severe infection and may also spread communicable diseases such as Hepatitis B or C and HIV/AIDS.

### The following guidelines are highly recommended for all sharps users:

- Place used or discarded sharps in an acceptable sharps container.
- Take used sharps to a designated collection facility for proper disposal.
- Do not place used sharps in laundry detergent bottles, coffee cans, plastic milk jugs, plastic bags, aluminum cans or soda bottles since these containers routinely end up in recycling collection trucks and burst open in the trucks.

Never put used sharps in the trash or in your recycling!

For a complete list of collection facilities visit the DNR website at: <http://dnr.wi.gov/topic/healthwaste/householdsharps.html> or call the Department of Natural Resources at 608-266-2111.

# 10 Steps to Recovering Recycling

1

**Collection:** Trucks usually collect curbside recycling every other week.

2

**Tip Floor:** The trucks empty recyclables onto the tipping floor.

3

**Metering Bin:** This machine evenly meters the amount of recycling entering the facility.

4

**Pre-Sort Line:** The sorters remove items that may harm or interfere with equipment such as plastic bags, large metal items and trash.

5

### Glass Collection:

Since glass is highly abrasive on conveyor belts and equipment, it is removed first and stored outside until it is shipped.

6

### Paper Separation and Storage:

Disc Screens separate the paper from the containers. Workers look for items that don't belong in the paper. The paper is stored in hoppers until it is ready to be baled.

7

### Container Separation:

Metal cans are removed from the conveyor belt by a large magnet. Employees and high-tech machines are used to sort plastics and aluminum.

8

### Baling the Materials:

The materials need to be compressed into bales for easy shipping to buyers.

9

**Shipping:** When enough bales are created, a semi truck is loaded to deliver to buyers who remanufacture the material into new products.

10

### Sales of the Material:

**Paper:** sold to local paper mills in Green Bay and Menasha

**Plastics and Metal:** sold mainly in the Midwest

**Aluminum:** sold to Anheuser Busch

**Glass:** sold to a local glass recycler in East Troy, WI

# Ch-ch-ch-ch- Changes

Residents continually ask “Why can’t we recycle more plastics?” Although it is encouraging hearing from so many residents, it has been a challenge to fill this request.

The good news is, coming in mid-summer 2014; we will be adding more plastics and milk and juice cartons to the current collection program!

The Tri-County Recycling Facility is currently undergoing a redesign of the sorting line. We are adding a station to identify and remove the new materials from the main conveyor belt. The materials will then travel to designated storage bins before being baled for easy shipping.

## **The decision to modify the recycling facility was due in part by the following:**

- **Markets for #4 & #5 plastics are now strong and reliable**
- **Carton recycling technology is now an option in our area**
- **The increase in our service area and tonnage creates an increased need for a second baler**

Remember to keep your eyes and ears open to learn when you can add the new materials to your recycling bin! We plan to advertise the BIG news in many media outlets, but the fastest and easiest way to find out is to “Like” your County’s Recycling Facebook page.

# Realizing Value Through:

Foth is proud to assist Brown, Outagamie, and Winnebago Counties in their recycling efforts, as well as in their ability to recover and sell renewable energy and beneficially reuse materials. Foth is also proud to have been the lead consultant on a major study for the Wisconsin Department of Natural Resources analyzing the current and future potential for plastics recycling. We're working hard to help Wisconsin and our local communities thrive.

# Medication Disposal

## is a Two-Fold Issue

It wasn't long ago when DDT and PCBs were thought of as beneficial materials. However, today they are considered extremely hazardous and cause significant damage to public health, wildlife and the environment.

The potential dangers of improperly disposing over-the-counter and prescription medications may be the next great threat, but fortunately, there are a number of local disposal programs available to properly collect and dispose of unused and unwanted medications.

### Environment

The impact of pharmaceutical waste on our environment has yet to be fully realized. Studies conducted both nationally and statewide have identified numerous medications showing up in our drinking water. The negative effects of these substances on humans, animals and aquatic life are only recently being studied and understood.

Medications enter the water system by being expelled from the body or when people flush them down the toilet or drain. Bathroom waste then travels to a wastewater treatment facility to be processed before being discharged into our lakes and rivers. In addition, some people throw medications in the trash. As the medication breaks down in the landfill it becomes part of the waste liquid called leachate. Leachate is collected in the landfill and sent to wastewater treat-

ment facilities to be processed before discharging into lakes and rivers.

Since most wastewater treatment facilities do NOT have the ability to remove medications from wastewater, flushing medications down the drain and toilet, or throwing them in your trash are NOT responsible disposal methods.

### Abuse/Misuse

Pharmaceutical drugs, when abused or taken incorrectly, create a substantial health risk, and storing unused or outdated medications opens up the opportunity for misuse. One in five teens has reported intentionally misusing someone else's prescription medications and nearly half of the teens said they got the medications from friends or relatives by raiding their medicine cabinets. Accidental poisonings can also occur with children or pets who unintentionally consume medications that are improperly disposed.

### Local Drop Boxes

In order to lessen environmental and safety concerns of leftover and unwanted medications, it is important to responsibly dispose of them at a local drop box or collection event. Brown, Outagamie and Winnebago Counties offer a number of convenient collection sites that residents may utilize.

### Guidelines:

- Accept over-the-counter and prescription pills, liquids, creams, powders, inhalers and pet medications at no cost to participants.
- No sharps or biological material.
- For residents ONLY! No clinic, hospital or business disposal.
- Keep medications in original containers; do not mix pills.
- Remove patient's name from bottle with a permanent marker, but leave medication name intact.

Sanimax has been in Green Bay since 1881

Sanimax processes more than 850 million pounds of animal by products each year—that's 850 million pounds that would otherwise go to landfills!

If you lined up all of the full trailers Sanimax reclaims in a year, they would stretch from Green Bay WI to Orlando FL

Sanimax Supplies the ingredients for **MANY** household products, including:

- Pharmaceuticals
- Pet Food
- Cosmetic
- Soaps

In 2013 Sanimax reduced our community odor profile by 61%.

We continuously seek ways to improve our operations through research and development, including odor control measures and development of additional useful ingredients.

Sanimax donates to more than 40 local charities each year.

Sanimax impacts over 385 jobs and creates over \$125 million in economic impact in the greater Green Bay Area.

For more information about Sanimax, visit our website at [www.sanimax.com](http://www.sanimax.com)

# 2014 Agricultural & Household Hazardous Waste Clean Sweep

## Bring Your Old and Unwanted:

Pesticides  
Herbicides  
Poisons  
Dioxins  
Lead & Oil Based Paint  
Spray Paint  
Varnish/Stain  
Solvents  
Gasoline  
Automotive Fluids  
Toxic Cleaners  
Degreasers  
Waxes/Polishes  
Mercury  
Unknown Chemicals

### **HOUSEHOLD HAZARDOUS MATERIALS**

are found in sheds, garages, basements, craft rooms, workshops or under kitchen sinks in many homes. Often these products are labeled with words such as: Caution, Warning, Danger, Poison, Flammable, Combustible or Corrosive.

### **AGRICULTURAL HAZARDOUS MATERIALS**

such as pesticides, herbicides and chemicals are found on both active and abandoned farms. Banned substances such as DDT, Chlodane, and Silvex, 2, 4-D will be accepted.

### **BUSINESS HAZARDOUS MATERIALS**

will be accepted from businesses identified as Very Small Quantity Generators (VSQG) and located within the participating Counties. Businesses must pay for their disposal costs, but may avoid on-site pick-up fees. Eligible businesses may receive a 50 percent subsidy for disposal of pesticide wastes.

## Why Participate in this Event?

When disposed of improperly, household and agricultural hazardous materials can threaten the quality of our drinking water, increase the threat of algae bloom and threaten the safety of sanitation workers.

In addition, hazardous materials left around the house and garage pose an accidental poison risk to children and pets.

## Important Information for Clean Sweep Participants

- **DO NOT MIX** materials together.
- Tighten caps/lids and transport materials upright in a cardboard box. Your containers must be left at the collection site.
- **Appointments are required.**
- Household containers are typically 5 gallons or less in size. Household or agricultural **containers larger than 5 gallons** should be identified when scheduling your appointment.
- Please identify the material source (i.e. your home, an active or abandoned farm).
- This service is free of charge for household and agricultural material but **donations will be accepted** to help offset program costs.

## The following materials **WILL NOT** be accepted at the Clean Sweep Events.

*For proper disposal, please contact your county.*

- **CFL and fluorescent light bulbs**
- **Vehicle and household batteries**
- **Propane cylinders and gas tanks**
- **Explosives and ammunition**
- **Radioactive material** (smoke detectors)
- **Latex paint**
- **Appliances** (Microwaves, stoves, dehumidifiers, etc.)
- **Electronic devices** (TVs, computers, printers, etc.)

**Appointments are required.**

# Brown County

## Household Hazardous Waste Facility

Household Hazardous Waste (HHW) Facility | 2561 South Broadway | Ashwaubenon

Questions: (920) 492-4950 or [www.BrownCountyRecycling.org](http://www.BrownCountyRecycling.org)

Business and farm material by appointment **ONLY** (920) 492-4950

### Residential Drop-Off Hours:

Thursdays - Noon to 6 p.m.

Saturdays - 8 a.m. to 2 p.m.

### Product Exchange Room:

Thursdays - 1 p.m. to 6 p.m.

Saturdays - 8 a.m. to 2 p.m.

The Brown County Household Hazardous Waste facility accepts material from households and small businesses that pose a threat to human health and the environment. These are materials that are flammable, poisonous, corrosive or reactive. The facility is available to residents of Brown, Outagamie and Winnebago Counties. Businesses and residents of other counties will be charged a fee to drop off material at the facility.

### Acceptable Materials

- Flammable - Paint, gasoline, paint thinners, solvents
- Corrosive - Acids, bases, cleaning products
- Reactive - Pool chemicals
- Poisonous/Toxic - Pesticides, cleaning products
- Others - Fluorescent lights, ballast, computers and electronics (for a charge), cooking oil, propane tanks, oil, antifreeze, batteries

### Unacceptable Materials

- Explosives, ammunition, black powder
- Flares
- Sharps
- Biological Waste
- Infectious Waste
- Radioactive Material
- Pharmaceuticals

Materials that **cannot** be brought to the Household Hazardous Waste Facility are tires, infectious and biological wastes, radioactive material, explosives and ammunition. Visit our website [www.BrownCountyRecycling.org](http://www.BrownCountyRecycling.org) for more information in regards to the disposal of these materials.

### Product Exchange Room

- Much of the material brought to the facility is in good shape and doesn't need to be disposed of. Each year, 1,000s of paints, stains, thinners, pesticides, automotive products, cleaning products, etc. are placed in our Product Exchange Room for the public to take for free. This is a great place to find free material for home repairs and fix ups!

### What Do We Do With It?

- Most materials, like paint and solvents, are bulked into 55-gallon drums. These drums are removed by a hazardous waste contractor who further bulks the material for transportation to a company that uses it as fuel.
- Some materials, like pesticides, are packed into drums called loose packs. Loose packs are drums filled with smaller containers. These drums are sent to a disposal company for additional sorting.
- Acids and bases are sent for disposal in lab packs.
- Latex paint is sent to a company to recycle into new paint.

## Household Sharps Drop Off Sites

To reduce public health risks such as accidental needle sticks, Wisconsin law requires all citizens to manage sharps safely. It is illegal to put sharps in the trash or with recyclables.

Sharps users are highly encouraged to place their used or discarded sharps in an acceptable sharps container and take them to a designated sharps collection station for proper disposal.

For specific drop off locations and program guidelines go to **BrownCountyRecycling.org** and click on "Sharps" on the right side of the page or call the Brown County Health Department at (920) 448-6400.

### Participating business who may offer sharps collection include:

- Aurora Baycare
- Aurora Pharmacies
- Bellin Health Clinics
- Bellin Memorial Hospital
- Brown County Health Dept
- CVS Pharmacies
- Dousman Clinic
- Krider Pharmacy
- K-Mart
- Prevea Health East De Pere
- Shopko Pharmacies
- Shopko Express
- St. Mary's Hospital
- St. Vincent Hospital
- Walgreens Pharmacies

## Electronics Recycling

Residents have many opportunities to recycle electronics.

The following items are banned from landfill disposal: televisions, computers, DVD/VCR players, fax machines, keyboards, mice, speakers, flash drives, hard drives and cell phones.

### Call ahead for information on pricing and guidelines.

Van Dyke St | Village of Wrightstown | 920-532-0434

## Waste Oil Drop Off Sites

**Did you know...** if you recycle just two gallons of waste oil it can generate enough electricity to run the average household for almost 24 hours? Oil is a valuable, reusable material. It doesn't wear out – it just gets dirty. Used oil and filters brought to a collection site will be recycled and re-refined into clean motor oil or used as an alternative energy source.

### Guidelines:

- Use a dirt-free container with a leak-proof lid.
- Do Not use containers that previously held household chemicals, such as cleaners, solvents, fuel (gasoline), paint or bleach.
- Do Not contaminate used oil with solvents or other material such as anti-freeze.

**Call ahead for program information.**

## Battery Recycling Locations

Laptops, power tools, MP3 players and cell phones are just a few of the battery operated devices that have become part of our daily lives.

Various types of batteries such as rechargeable and vehicle batteries contain toxic heavy metals that may harm our environment if they are not properly disposed. Recycling opportunities exist for these battery types, lessening the environmental risks.

Alkaline batteries however are NOT considered hazardous, but are recyclable in some areas for a fee.

3701 E Calumet St | Appleton | 920-996-0573

## Fluorescent Bulb Recycling Locations

All fluorescent bulbs, including the compact fluorescents (CFLs), contain mercury. These bulbs often break when thrown into a dumpster, trash can or compactor, and end up in our landfills. By recycling CFLs and other type fluorescent bulbs we can minimize the amount of mercury being released into the environment. Recycling bulbs also allows for the reuse of glass, metals and other materials within the bulb. Virtually all components of a fluorescent bulb can be recycled.

## Waste Oil Drop Off Sites

**Did you know...** if you recycle just two gallons of waste oil it can generate enough electricity to run the average household for almost 24 hours? Oil is a valuable, reusable material. It doesn't wear out – it just gets dirty. Used oil and filters brought to a collection site will be recycled and re-refined into clean motor oil or used as an alternative energy source.

### Guidelines:

- Use a dirt-free container with a leak-proof lid.
- Do Not use containers that previously held household chemicals, such as cleaners, solvents, fuel (gasoline), paint or bleach.
- Do Not mix with solvents or other material such as anti-freeze.

1495 Tullar Rd | Neenah | 920-886-6260

*\*Accepts oil filters and absorbents*

## Household Sharps Drop Off Sites

To reduce public health risks such as accidental needle sticks, Wisconsin law requires all citizens to manage sharps safely. It is illegal to put sharps in the trash or with recyclables.

Sharps users are highly encouraged to place their used or discarded sharps in an acceptable sharps container and take them to a designated sharps collection station for proper disposal.

### **DO NOT PLACE IN RECYCLING OR TRASH**

**Call ahead for program information.**
